

# BioShield® biopsy valves & irrigation accessories

It is nearly impossible to manually clean, disinfect, flush and dry biopsy valves. Reused biopsy valves can become leaky and potentially harbor dangerous pathogens. BioShield® biopsy valves are disposable – offering unsurpassed protection for patients and healthcare workers. An innovative solution to your irrigation needs and cross-contamination concerns, all BioShield® biopsy valves and accessories are disposable – providing convenience, value and peace of mind.

## Olympus & Fujinon (G5 series and newer) compatible

### BioShield® biopsy valve w/universal irrigating adaptor

Single-use design eliminates cross-contamination concerns associated with reprocessed valves. Packaged with the universal irrigating adaptor, this product provides maximum convenience.

product number	description	adaptor gauge	adaptor length (cm)	units/box
00711132	Olympus/Fujinon	15	2.54	50

### BioShield® irrigator

Featuring an irrigation line for remote access irrigation and easy connection to a syringe or a water pump when used in conjunction with our optional universal water pump extension tubing.

product number	description	irrigation line length (cm)	units/box
00711133	Olympus/Fujinon	30.5	50

### BioShield® biopsy valve - economy

Individually packaged biopsy valves in a larger quantity for maximum value.

product number	description	units/box
